

Parenteau BioConsultants Consulting Services

Our goal is to deliver consulting that enables exceptional results. We believe that every task is important if it helps a company achieve its goals.

How we can assist:

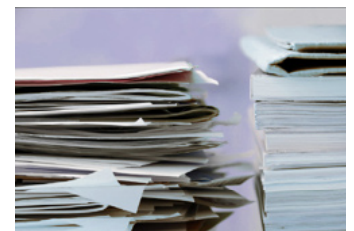

Analysis and strategic planning

- * Strategic technology analysis and pipeline assessment
- * Analysis of best biological fit for a technology and its capability
- * Preclinical development planning and implementation
- * Scientific and preclinical strategy to address potential regulatory concerns

Technology positioning

- * Preparation of scientific and technical package for presentation, due diligence and sale or partnering of novel technology
- * Packaging and positioning of preclinical data to support clinical, regulatory and post-marketing efforts
- * Technical due diligence and competitive assessment

Expert review, technical writing and knowledge support

- * Critical literature reviews for regulatory submissions and documentation to support technology and product strategy
- * PBC Paths for Progress Technical writing for publications and regulatory documentation
- * White papers on specific bioscience topics for education and marketing
- * Commissioned technical analysis of key bioscience or technology areas to support decision-making and clinical targeting

Management and technical support

- * Coaching in life science management and guidance in strategic use of bioscience technology in life science R&D
- * Assistance in designing and implementing a preclinical research plan to support mechanism of action, regulatory approval and labeling
